

# LLVM RELEASE PROCESS

Order out of chaos

# TOBIAS HIETA

Ubisoft

Toolchain Maintainer

Release Manager

- Why make releases?
- How do we make a Release?
- How to get involved.
- How to improve the process.

# WHY MAKE RELEASES?

- Why not just develop and integrate at HEAD?
- Releases takes focus away from development
- “We” already integrate it daily/weekly

LLVM Development is happening at a furious pace.

- 100-150 commits / day
- ~17000 commits / release
- API breaks

We need to provide a stable point for integrators

- Distributions
- Vendors
- Third-party development
- Focus points

Deprecations can be helped by releases

Easier communication about changes

Provide “points of break”

# RELEASE MANAGERS

- Shepherd the release
  - Triage issues
  - Communicate with the community
  - Improve the release workflow
- and ... a lot of nagging.

**TOM STELLARD, REDHAT**

Even releases (14, 16, 18)

**TOBIAS HIETA**

Odd releases (15, 17, 19)

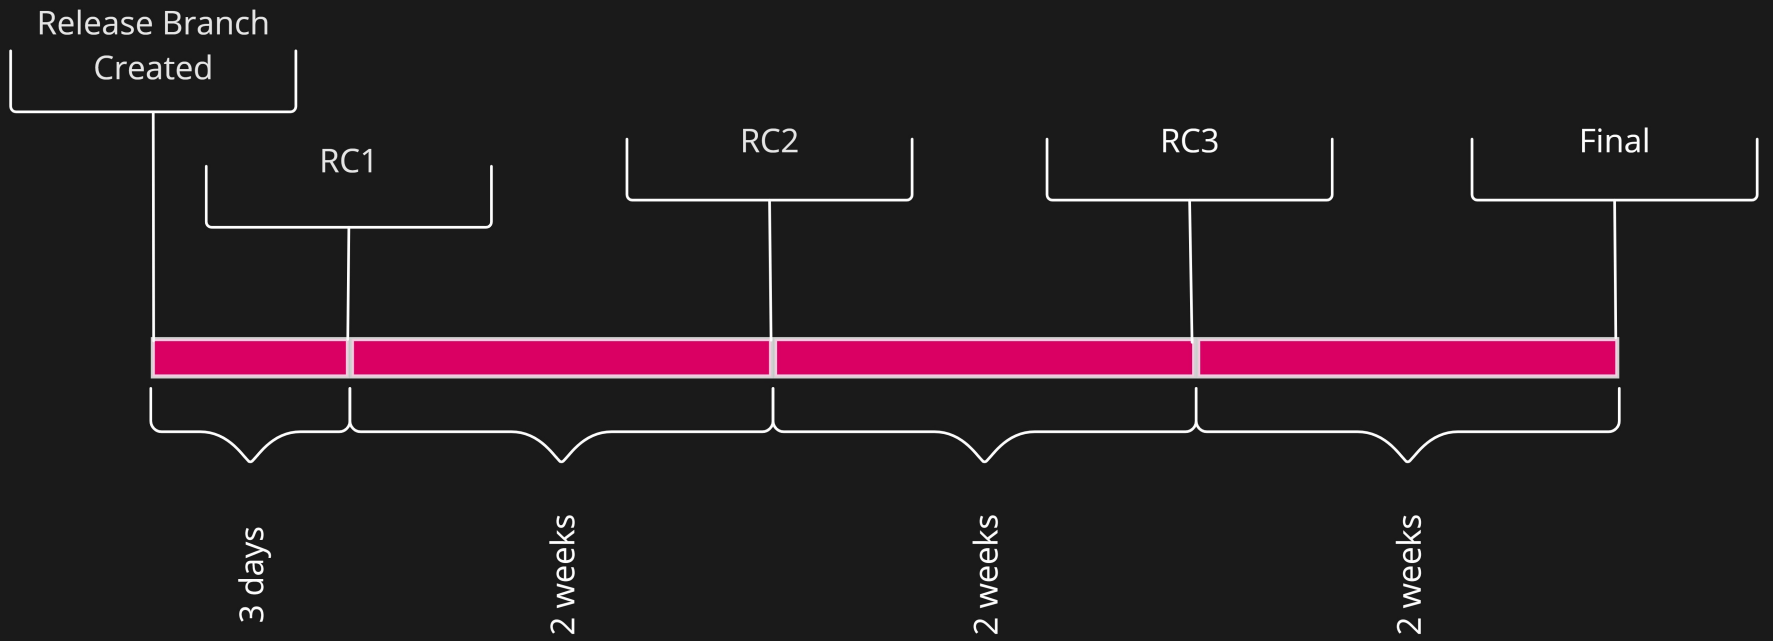

2 releases per year, 6 months apart

**Even releases:**

4th Tuesday of January

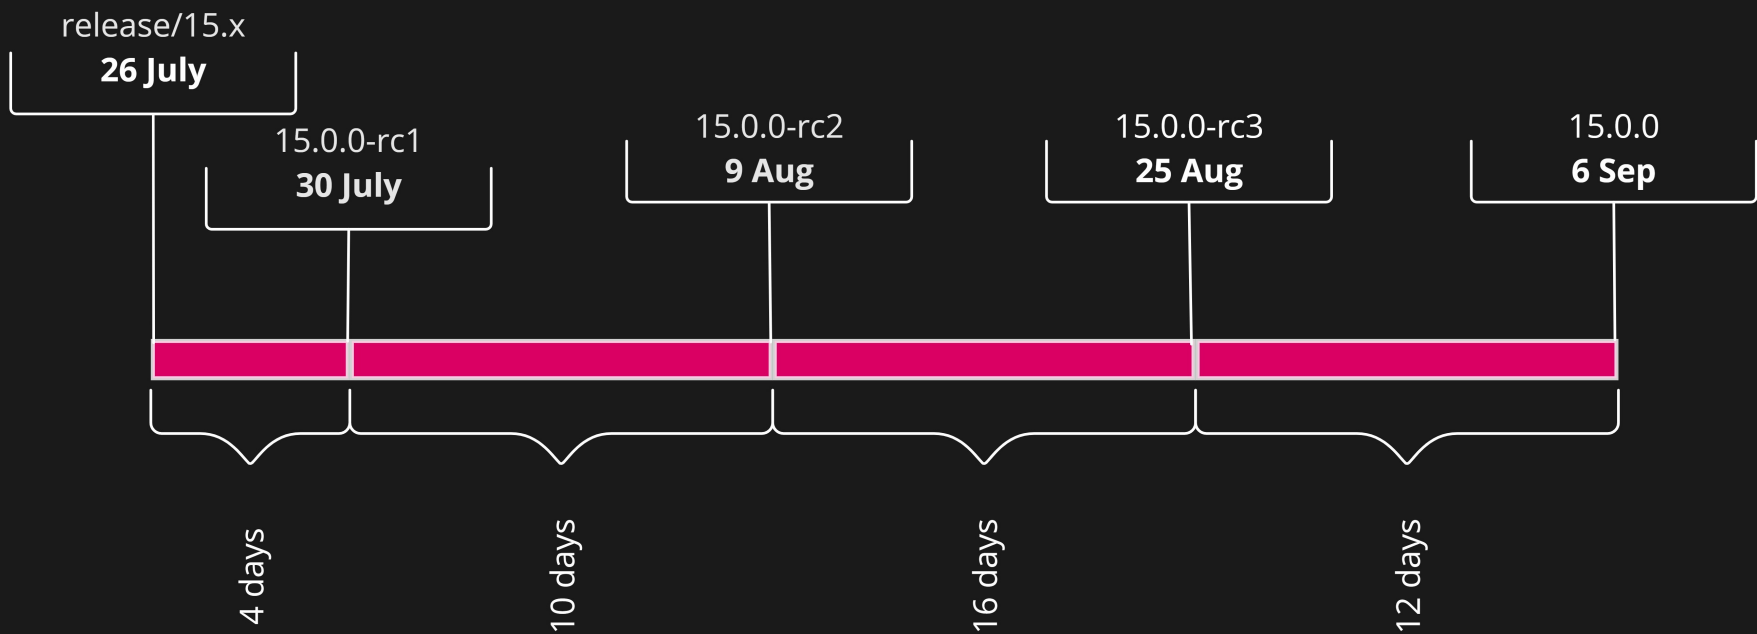

**Odd Releases:**

4th Tuesday of July

**PLAN, MEET REALITY**

Like a clock

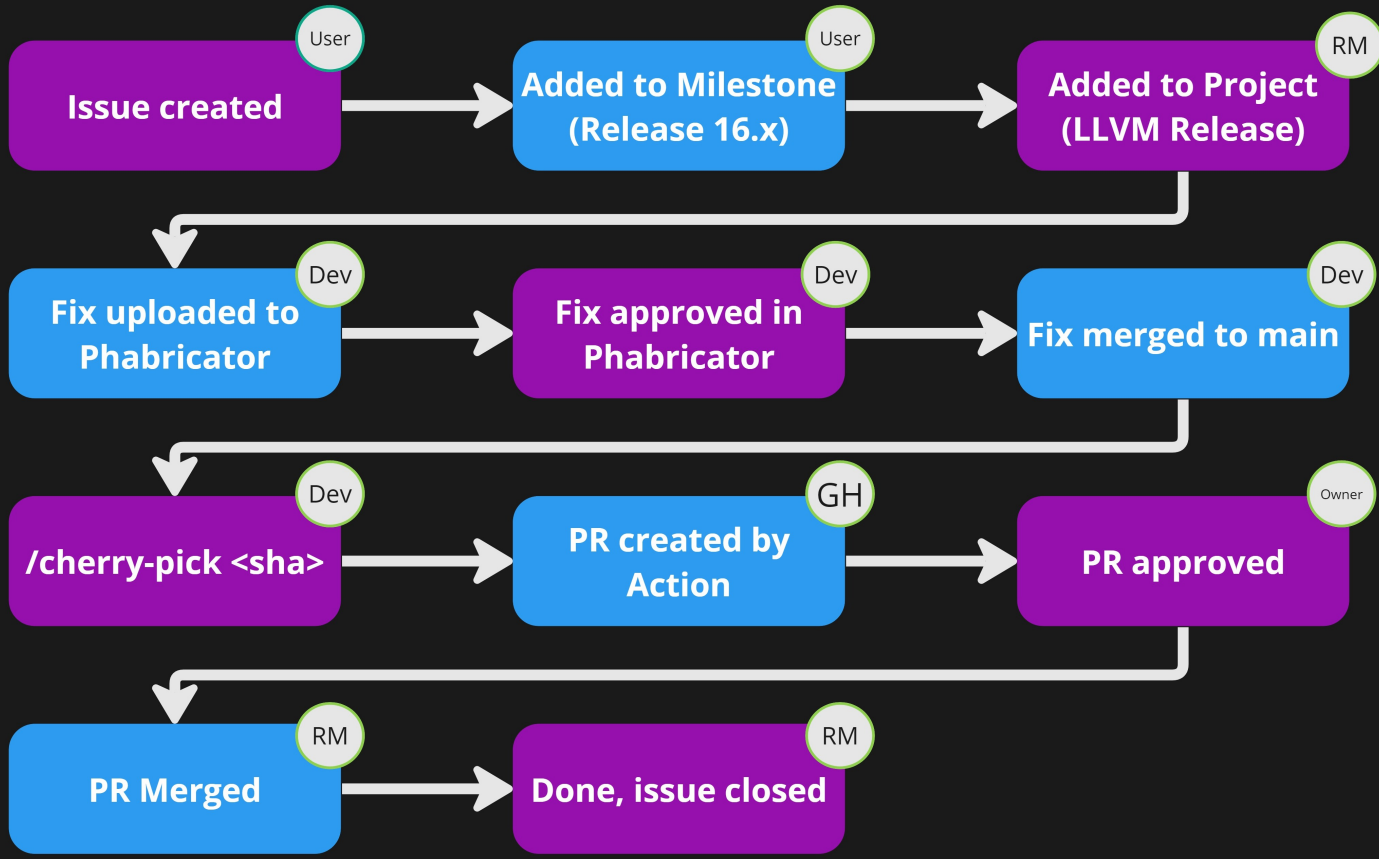

# RELEASE TESTING

10+ GitHub Actions

Release Testers

The Community

# WHAT WE APPROVE

## ALWAYS

Regressions, Crash fixes

## EARLY RC

Optimization, Finish Features

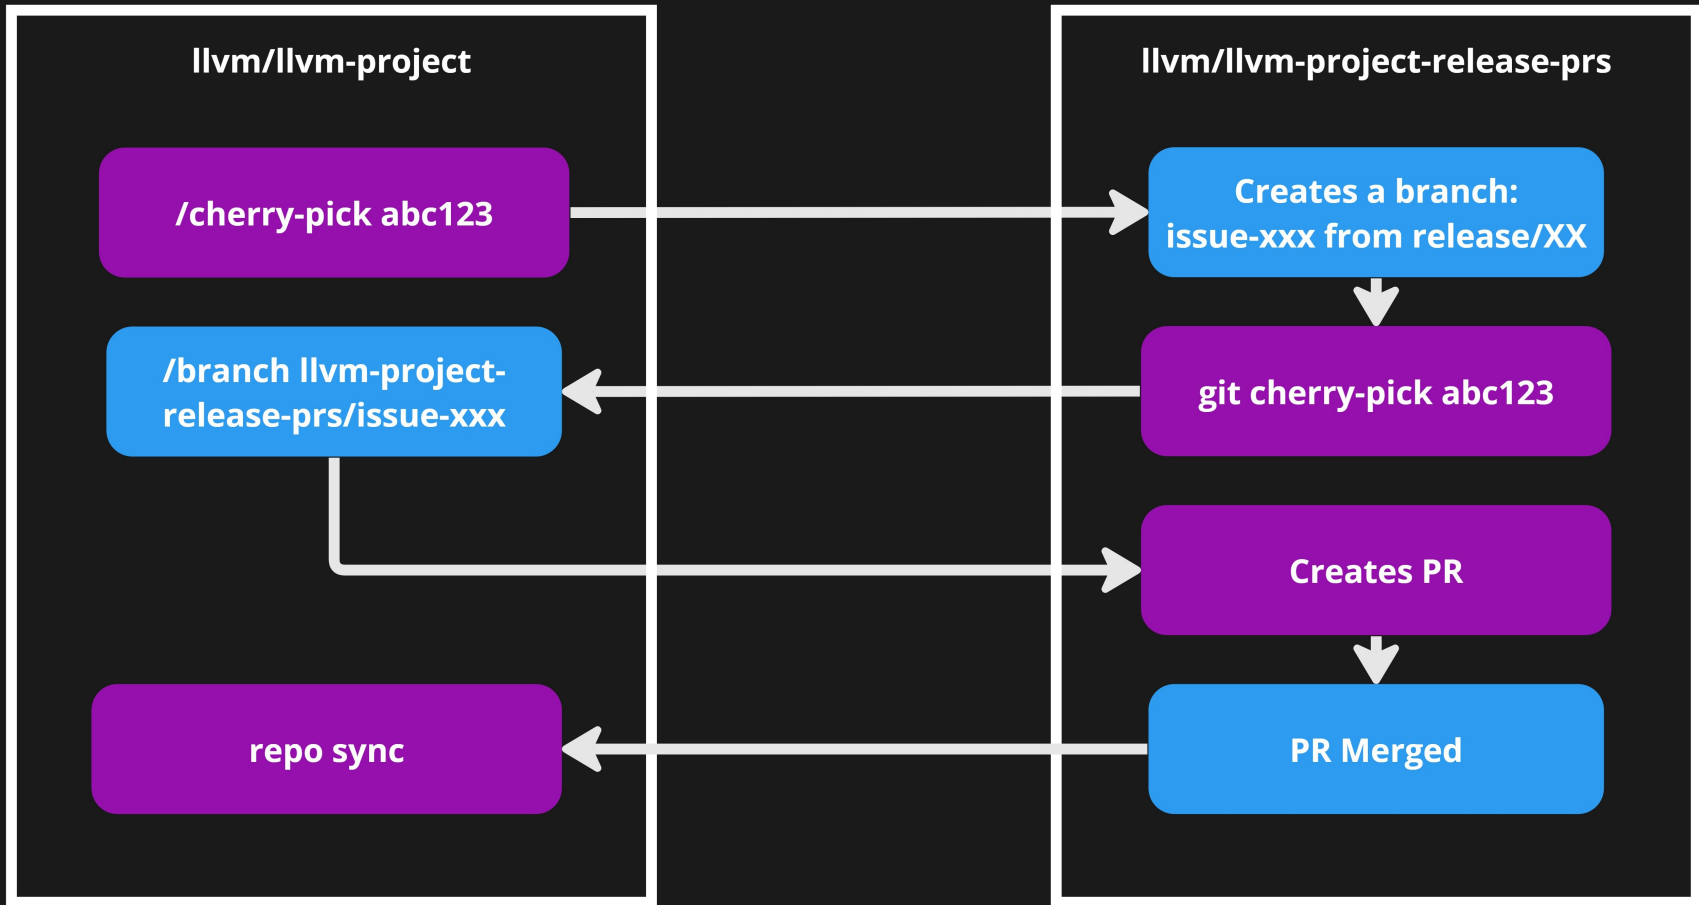

## POST RELEASE

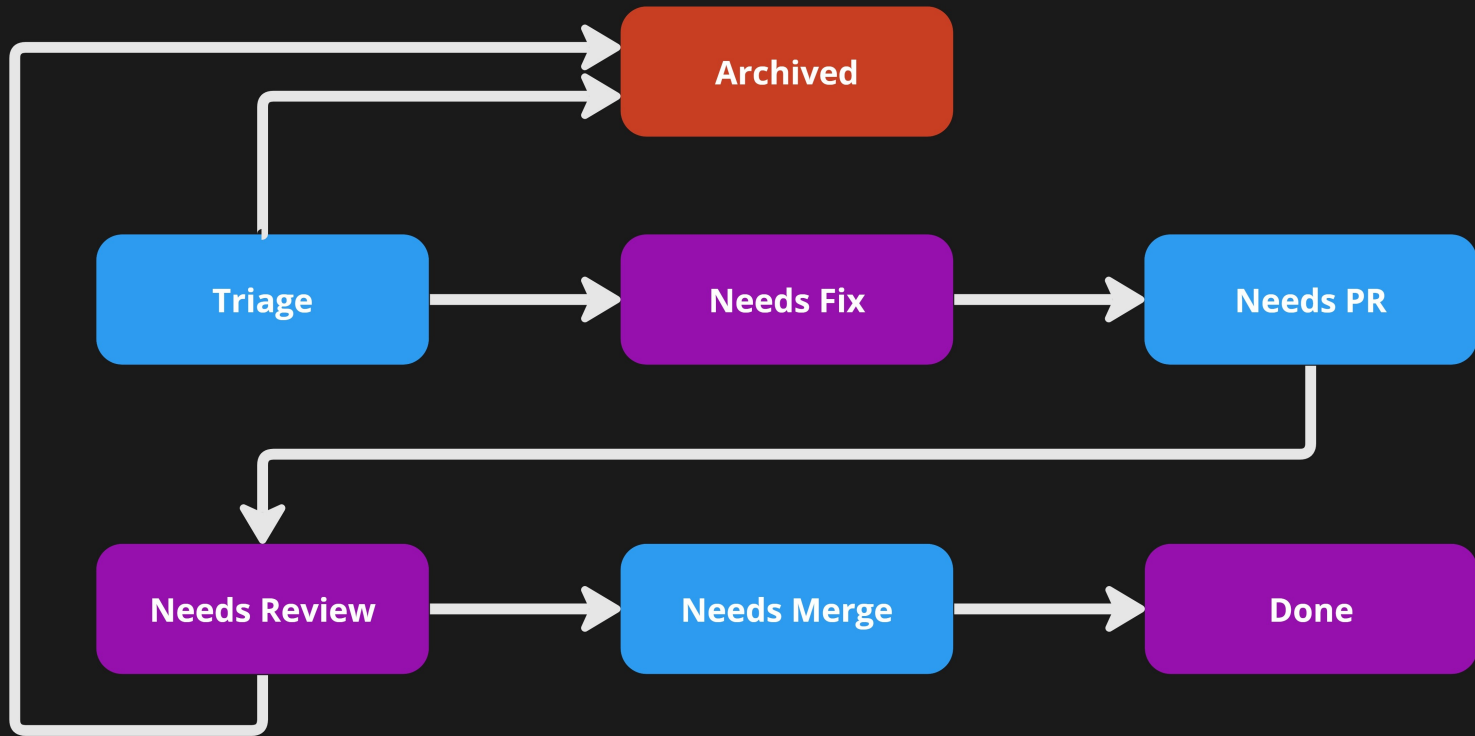

Safe fixes, ABI/API compatible

# **NO HARD RULES!**

**The Release Manager decides!**

But we usually work with the code owners to find the best solution to each issue.

/cherry-pick `fc4494d`

(This is necessary to fix boot failures in the Linux kernel when built with stack protectors. It also reduces code size for C++ code built without exceptions or which contains `noexcept` `noreturn` functions when built with stack protectors).

nickdesaulniers added the `release:backport` label last week

nickdesaulniers added this to the LLVM 16.0.2 Release milestone last week

@xiangzh1 What do you think about merging this PR to the release branch?

 tries (and fails ) to find the approver via  
Phabricator API

efriedma-quic commented 2 weeks ago

Member ...

Cherry-pick seems fine. It's relatively high-impact for a cherry-pick, but given the reported regressions I think it makes sense.

owenca commented 2 weeks ago

Member ...

@mydeveloperday @rymiel @owenca OK to merge?

Yep.

# Reply as you want!

# TLDR

- File an Issue 
- Set the correct Milestone 
- Land the fix normally via Phabricator 
- `/cherry-pick <sha>` 
- Reply to the bots pinging you! 
- Congratulations you have landed a fix! 

# WHEN THINGS GO WRONG

- Additional commits in your PR
- cherry-pick (  ) failed
- Need to add additional commits to PR

# ADDITIONAL COMMITS IN PR

This happens when `llvm/llvm-project` and `llvm/llvm-project-release-prs` are out of sync.

**Ignore it! It's harmless!**

# -PICK FAILED

- Create a branch in your llvm-project fork.  
(tru/llvm-project/myfix)
- Reset to release/16.x (or whatever release)
-  -pick tcommit and fix merge issue.
- Push to fork
- comment: /branch tru/llvm-project/myfix

# ADD MORE COMMITS TO PR

```
/cherry-pick abc123 321cba
```

This also overwrites, since it always resets to the latest release branch.

# HELP WANTED

- Become a Release Tester
- Help triage issues
- Reply to the 

# RELEASE TESTERS

- Runs `test-release.sh` on their platform
- Reports any test issues in GitHub
- Upload binaries to GitHub

# TRIAGE ISSUES

- Check the release milestone
- Review Fixes, especially in your “area”
- Reproduce issues and confirm fixes

REPLY TO THE

Please.

**QUESTIONS?**

# IMPROVE RELEASE PROCESS

- Working on automatic binaries
- When we move to GitHub PR's everything will be better 😊
- Better way to get approval for fixes?

- <https://llvm.org/docs/HowToReleaseLLVM.html>
- Discord: #release / thieta, tstellar
- Forums: Project Infrastructure/Release Testers

**THANKS!**
